

For existing RadarOpus 2.2 users there is a free Fix (Update) to update your current version to the new macOS 11 BIG SUR update.

The best is to install the RadarOpus Fix (update) before you download the macOS 11. Then transition will go smoothly.

But you can also install the RadarOpus Fix (update) after you have already installed macOS 11.

[Click here to download the free Fix \(update\)](#)

- First download the file
- Then **double click** on the file to start the installation
- You will get a warning, that Mac cannot verify the program, **click on OK**
- Go to the **APPLE** icon, then **settings**, then **Security and privacy**

You will see the RadarOpus update file waiting there to receive your confirmation, unlock the window with your mac password.
